

OLIN Products: **OPVR-1000 / OPVR-1200 / OPVR-1600**

## Quick Installation Guide

Designed to make your Personal Video Recorder (PVR) unit setup procedure easier:

**STEP 1** - Switch TV off at power point.

**STEP 2** - Unplug antenna from back of TV. Then plug antenna into "ANT IN" slot at rear of Personal Video Recorder (PVR) Unit (hereafter "the Unit").

**STEP 3** - Using the AV cable, plug cords into the unit: yellow into yellow (CVBS) slot, white into white (Audio L) slot, red into red (Audio R) slot. Then plug the other end into "AV IN" sockets at rear of TV: yellow into yellow (Video), white into white (Audio L/mono), red into red (Audio R). If there is no red slot, just plug in yellow and white cables.

**STEP 4** - Plug in Unit's power cord. Insert two AAA batteries into Unit's remote.

**STEP 5** - Turn on power at the wall for both the Unit and the TV. Turn the TV on. Flick the "ON/OFF" switch on the back of the Unit to "ON".

**STEP 6** - Using TV remote control, press the TV/AV button until the 'AV' or "Video" channel is selected. An "OLIN" logo will appear, then the "FIRST INSTALLATION GUIDE" menu. In the case a black screen displayed on the TV rather than "FIRST INSTALLATION GUIDE", press 'MENU' button on the remote control, scroll down to 'Setting' and select 'System Setup', highlight 'Factory Setting' and press 'OK'. Key in the password and switch to 'YES' then press 'OK' to confirm.

**STEP 7** - Follow the GUIDE, use LEFT/RIGHT arrows to change and press 'OK' to confirm.

**STEP 8** - Auto Scan will begin. This process will take approximately 2 minutes to complete. Updated searched channels will appear on-screen indicating progress. The total number of channels found\* is also listed.

**STEP 9** - Program channel will be displayed when auto scan is complete.

**STEP 10** - Before recording a program, you need to make sure the LOOP cable is attached to the unit properly. Check the "Recording Path" in Menu PVR if you have both built-in Hard Disk and External storage device available.

**STEP 11** - Press the record button (Red dot at the bottom of the RCU), use LEFT/RIGHT arrows to pre-set the duration and press "OK" to start recording. Press "STOP" to stop recording.

**STEP 12** - To watch recorded programs, press "PVR" to access the Record Program list. Use UP/DOWN arrows to select a program and press "OK" to preview in background, press "OK" again to watch in full screen. Press "EXIT" twice to return to live TV.

**Congratulations, you've completed the setup procedure.**

**\*NOTE:**

If no channel is found: Check the antenna is plugged in, if not plugs it in. If already plugged in, or, if "no signal" appears on screen, adjust the TV antenna to improve the signal..
